1. Product Introduction Summary

1.1. Overview

This document provides technical information for the various components of the Universal Marshalling Solution Release R100.

1.2. Scope

The following Universal Marshalling Solution items are included in this document.

- Universal Signal Conditioning Assembly 24 VDC
- Pass Through Adapter 24 VDC
- Digital Input Relay Adapter 24 VDC
- Digital Output Relay Adapter 24 VDC
- Universal Low Level Adapter – RTD & TC

1.3. Definitions

- **Universal Signal Conditioning Assembly (USCA):** An assembly that holds the 16 adapter, the connections for field wiring and mass termination cable connector
- **Input Output Termination Assembly (IOTA):** An assembly that holds the IOM and the connections for field wiring,
- **Input Output Module (IOM):** A device that contains most of the electronics required to perform a specific I/O function. The IOM plugs onto the IOTA.

2. Features

Universal Marshaling Solution provides standardized marshalling for central and distributed installations using signal conditioning assemblies. The signal conditioning assemblies handle 16 I/Os including disconnect, fusing as default, and when needed signal conditioning adapters (SCA) including isolation, intrinsic safety, relay, and other functions can be plugged in optionally. The SCA supports flexible wiring configurations without the need for custom wiring.

.

The unique features of Series C I/O include:

- Three level flexible field terminations are provided to cater to various field wiring requirements.
- The Signal Conditioning Adapters are plugged into the USCA to eliminate the need for a separate installation of isolators, relays, signal converters and barriers.
- USCA has integral (optional) fuse and knife disconnect for easier plant installation and maintenance.
- D-Sub connector is provided on the USCA for interfacing with the Series IOTA.
- Field power from Series-C IOTA via the mass termination cable is supplied through the USCA.
- Optional power connector is provided to supply power to the active signal conditioning adapters.
- Optional 16 plug and play Signal Conditioning Adapters.
- Vertical mounting for more effective wiring since most field wiring applications require entry from the top or bottom of the cabinet.
- An LED for a quick visual cue to draw the Maintenance Technician’s eye to important status information of relay and active signal conditioning adapters.

USCAs combine multiple functions into a single piece of equipment:

- Plug and Play adapters for optional signal conditioning.
- On-board flexible termination of process signals.
- On-board connection to Series C IOTAs.
- On-board Field power distribution.
- USCA receives 24 VDC power.

3. Universal Marshalling Solution Sizing

In virtually all configurations, the Universal Marshaling Solution provides useful, maintainable process equipment connections in a smaller footprint than existing competitors and Honeywell equivalent products. Installing signals conditioning adapters contribute to overall total installed cost savings.

USCA has a standard size for passive and active signal conditioning. The 16 channel USCA is 198mm (H) X 137mm (W) X 145 mm (D).

3.1. Functions

- **Universal Signal Conditioning Assembly (USCA)** – CC-USCA01 is a back plane assembly which can accommodate 16 signal conditioning modules. Field side terminals of each channel is provided with integrated fuse and knife disconnect function. DCS side interface is provided through a single mass termination cable (MTC) which connects all 16 channels. CC-USCA01 is DIN rail mountable.
- **Universal Pass Through Adapter (UPTA)** – CC-UPTA01 is a single channel pass through module which allows direct connectivity between DCS field terminals (both live & return) and the field device. This module does not require external power to operate.
- **Digital Input Relay Adapter (UDIR)** - CC-UDIR01 is a single channel relay input module for low voltage applications. Coil side of the relay interfaces with the field device and the contact side gets connected to DCS. This module does not require external power to operate.
- **Digital Output Relay Adapter (UDOR)** - CC-UDOR01 is a single channel relay output module for low voltage applications. Contact side of the relay interfaces with the field device and the coil side gets connected to DCS. This module does not require external power to operate.
- **LLI - Low Level Input Adapter(LLAI) -** CC-ULLIO1 is a single channel low level analog input module which supports temperature measurement using TC or RTD Sensors. This module is suitable for the majority of process and control applications in thermal industries. This module does not require any external power to operate and mainly driven from the 4-20mA loop. This gets connected to Series C Analog Input (HART/NON HART) and UIO module connected to DCS.
